

This is only a sample answer and you must use your own clinical judgement and skills to complete this form.

Brief Clinical History:

This ___ yo male/female weighing ___ kg with no known allergies has been diagnosed with _____ ICD-10 code _____ first discovered (date) _____ and has been previously treated with _(describe treatment and dates) _____. After reviewing the results of this patient's response to standard treatments, we have decided to consider expanded use of AVM0703 in hopes that the immunotherapy created by the release of highly active CD3+ Natural Killer T (NKT) cells, Cytotoxic T cells and CD11b+ Dendritic Cells will help slow the growth of this patient's cancer with limited side effects. Other forms of therapy during the course of this disease have failed to produce adequate response and we are hopeful AVM0703 will provide a therapeutic response to this patient's condition.
